To whom it may concern

15th July 1983

Bhagwan Shree Rajneesh

I am a Chartered Electrical Engineer with a Master's degree in Telecommunications and an Honours degree in Electronics and Associateship of the City & Guilds Institute of London. (see bottom of page).

During the past 30 years I have been involved in advanced systems designs for the Royal Navy and the Ministry of Defence, both for ships and aircraft. (For example: I designed and built the first Head-Up Display for the Navy - for the Buccaneer). I have also designed telecommunications systems for A.E.I. Ltd., new style radio receivers for British Hi-Fi manufacturers and new types of audio transducers. Some of these designs have led to patents and large-scale production. I now run my own consultancy business and am a registered government consultant on microprocessors. (Consultant No 252).

I first came to hear of Bhagwan Shree Rajneesh about six years ago through friends who had met him in India. I was not immediately impressed by his discourses but I was impressed by the improvement in the quality of living of those friends and their children. As the years have gone by I have continued to assess his teachings, (in the same way that I do those of other religions, cults and philosophies), and have found that they are deeper and more applicable to modern living than any other teachings extant. I know of no other present-day teacher, for example, who can take Zen and incorporate it fully into West living. Books by other authors, (Zen Archery, The Zen of Motor Cycle

Continuation

Maintenance, etc) touch on the techniques but they do not give the depth of understanding which emanates from Bhagwan's Zen interpretations such as Dang, Dang, Doko, Dang.

Bhagwan Shree Rajneesh has many books of his discourses published (in the same way that Khirsnamati has), and they all contain teachings which are a positive help to living in this modern scientific world. His methods of meditation, healing, thinking and just being in the world today show a deep understanding of Western culture science and technology. I know of no other spiritual teacher who happily incorporates descriptions of Quantum jumps in his philosophical talks!
