

TO WHOM IT MAY CONCERN

Dear Sirs,

i am a master in Natural Science, specialised in Electron Microscopy. I contributed eight publications to International Congresses about scattering of electrons in bulk samples and the consequences on the resolution limits in Scanning Electron Microscopy and Electron Beam Lithography.

In Electron Microscopy you penetrate the mystery how nature works or, in other words, how god works in nature:

Science and religion meet ! (See e.g. F. Capra, The Tao of Physics, 1975 or P. Davies, Other Worlds, J.M. Dent & Sons Ltd., London).

This precisely is the work of Bhagwan Shree Rajneesh: He unites modern science and religion. And this is why i became, two years ago, a disciple of this man, who is not only a person of exceptional abilities but a true sage.

But he is not a man of theories, in Rajneeshpuram his vision is put into reality: I am the second time visiting Rajneeshpuram for the festival and it is very beautiful to see the flowering and immense growing of this commune. There are the most modern technologies helping to live in harmony with nature and there is the greatest living religious teacher spreading his love and his beauty.
