

Gent, 19th july 1983.

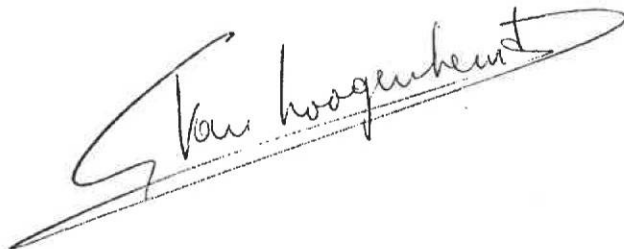

To whom it may concern,

I am a civil engineer in electronics and informatics. During five years I have worked at the university of Gent mostly in the field of fundamental research on solar energy. Now I am teaching informatics in a college department of industrial engineering.

Hereby I wish to let you know that I came in contact with the ideas of Bhagwan Shree Rajneesh through several personal contacts and some of his books. So I got very interested in his insights about ecology and in the development of new energies as being applied in Rajneeshpuram.

I want to testify that the vision of Bhagwan Shree Rajneesh on the growth of humanity has influenced people of different scientific abilities throughout the world.

Yours sincerely,  
Geert Van hoogenbemt
